

Amendments to the Specification

Please replace the paragraph [0022] at page 10 of the substitute specification filed April 11, 2006, with the following rewritten paragraph:

[0022] Fig. 6 is an enlarged view of the receiving table 5 of the cover case shown in Fig. 5 and is a plan view. The arms 15a and 15b are cut off from the support surface 13 of the receiving table 5 by the slit grooves 16 and 16, and the engagement protuberances 17a and 17b protrude from the distal ends of the arms, respectively. The engagement protuberances 17a and 17b are connected to each other through a soft resin and respectively have engagement pawls 18a and 18b that project upwardly and form a pair. The engagement pawls 18a and 18b extend ~~as a part of the engagement protuberances 17a and 17b~~ from the arms but can undergo deflection independently of the arms 15a and 15b. The engagement pawls 18a and 18b include upwardly-extending portions 20a and 20b that extend as part of the engagement protuberances 17a and 17b, and radially-extending portions 21a and 21b that extend from the upwardly-extending portions 20a and 20b in radially outward directions toward the base ends of the arms 15a and 15b such that the engagement pawls 18a and 18b are generally L-shaped in cross section.
